/note="Vector: pT7T3D-Paci; Site_1: Not I; Site_2: Eco RI;
Ist strand cDNA was prepared from 12 pooled bulk tumor samples and primed with a Not I - oligo(dT) primer.
Double-stranded cDNA was ligated to Eco RI adaptors
(Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library went through one round of normalization. "

inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent B. coli X110-GOld (Stratagene) cells and selected for ampicillin resistance."

(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwalpd (gql 4732114 [gb] AR129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli X110-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Biomedical Polymers Research Bldg., 20 S. 2030 E., SLC, UT

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 36, Application US/09547693
Patent No. 6639050
GENERAL INFORMATION:
APPLICANT: Kieliszewski, Marcia
APPLICANT: Kieliszewski, Marcia
TITLE OF INVENTION: Synthetic Genes for Plant Gums and Other Hydroxyproline-Rich
TITLE OF INVENTION: Glycoprocein
FILE REFERENCE: OHU-04089
CURRENT APPLICATION NUMBER: US/09/547,693
CURRENT PILLING DATE: 2000-04-12
NUMBER OF SEQ ID NOS: 236
SOUTHARE: Patentin version 3.0
SEQ ID NO 38
LENGTH: 30
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GENERAL INFORMATION:

; Sequence 10, Application US/08448386A
; Patent No. 584/708
; GENERAL INFORMATION:
; APPLICANT: START Technology, Partnership
; TITLE OF INVENTION: Antisense to Dopamine Receptor mRNA for Diagnosis and
; TITLE OF INVENTION: Treatment of Pathological Conditions of the Dopaminergic
; TITLE OF INVENTION: Nervous System
; NUMBER OF SEQUENCES: 13
; CORRESPONDENCE ADDRESS:
; ADDRESSE: Dann, Dorfman, Herrell and Skillman
STREET: 1601 Market Street Suite 720
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

No. is the number of results predicted by chance to h
score greater than or equal to the score of the result bein
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                     23237482

Sequence 94, Application US/11242139
Publication No. US20060099619A1
GENERAL INFORMATION:
APPLICANT: REMACLE, JOSE
APPLICANT: DU LONGUEVILLE, FRANCOISE
TITLE OF INVENTION DETECTION AND QUANTIFICATION OF MIRNA ON MICRO-ARRAYS
FILE REFERENCE: 035642-0107
CURRENT APPLICATION NUMBER: US/11/242,139
CURRENT APPLICATION NUMBER: 10/637,656
PRIOR PILING DATE: 2003-08-11
                             APPLICANT: JONES RHOADES, MATTHEW W.
APPLICANT: LEWIS BENNAMIN P.
APPLICANT: LEWIS BENNAMIN P.
TITLE OF INVENTION: SYSTEMS AND METHODS FOR IDENTIFYING MIRNA TARGETS
TITLE OF INVENTION: AND FOR ALTERING MIRNA AND TARGET EXPRESSION
